

# DERMATEND™

ALL NATURAL

Natures answer for mole, wart & skin tag removal

*DermaTend™ is indicated for the topical removal of moles, warts and skin tags.  
For External Use Only.*

#### **Directions:**

**Step #1** - Scratch or rub the **ENTIRE blemish** with toothpick or emery board provided. (**DO NOT scratch the surrounding skin**). Scratching should be hard enough to allow DermaTend™ to penetrate the blemish. You do not need to scratch so hard that it bleeds. **Scratching is the most important part!**

**Step #2** - Using a wash cloth with soap and hot water; cleanse the area using hot enough water to open up the pores.

**Step #3** - **Shake the DermaTend™ Tube** well before opening. Apply DermaTend™ to the entire surface of the blemish. Use only enough DermaTend™ to cover the affected area; a little goes a long way. (**Avoid getting DermaTend™ on the surrounding skin**) Cover with the fiber band aid.

**Step #4** – Leave DermaTend™ and band aid on for 24 hours until your next daily application. There **MUST** be a stinging sensation on the blemish usually lasting 5-10 minutes. (**If you do not feel any stinging, you have not scratched enough and DermaTend™ may not be working to its maximum efficacy**) Inflammation and redness around the blemish is normal. Wash off DermaTend™ and wait for scab to form. If scab does not form in 24 hours repeat Steps 1 - 4 until one does.

#### **ADDITIONAL NOTES:**

1. DermaTend™ works on flat moles as well as all raised moles.
2. Certain types of Warts/Moles/Skin Tags are very hard and stubborn. Be patient and give DermaTend™ time to fully absorb. Know that the process can take 3 to 6 weeks with very stubborn cases. Don't increase the amount you put on a stubborn blemish. Always use just enough to cover the mole, wart or skin tag.
3. DermaTend™ can cause redness and inflammation at the base of the growth, which is normal and will fade.
4. Be careful not to remove scab prematurely! Be sure to allow the scab to heal on its own (Up to 7 – 10 Days). This will lessen your chance of scarring. We recommend keeping the scab covered with a band aid to prevent it from coming off early.
5. *DermaTend™* should be a thick brown paste. It does not absorb into the blemish; rather it coats it. If you notice your DermaTend™ is watery with brown specks **please shake and gently massage the tube** to mix the ingredients.

#### **DermaTend™ INGREDIENTS:**

Sanguinaria canadensis, vegetable glycerin, distilled water, butter of zinc.

Keep Tightly Covered. Do not refrigerate.

**KEEP OUT OF REACH OF CHILDREN.**

**FOR EXTERNAL USE ONLY.**

Natures answer for mole, wart & skin tag removal

**Mandatory Legal Disclaimers:**

The statements regarding this product have not been evaluated by the FDA. Our product is FOR COSMETIC USE ONLY and is not designed to treat any other condition other than the removal of moles, warts and skin tags. This product is not intended to diagnose, treat, cure or prevent any disease. Information given is not intended to be a substitute for informed medical advice or care. You must consult with your dermatologist or family doctor regarding any questions or concerns you might have regarding you/your children's condition. In case of doubt, Solace International Inc. highly recommends that prior to usage, the user see a licensed dermatologist about the mole, wart or skin tag to be treated. Legally, Solace International Inc. cannot make any claims as to the effectiveness or appropriateness of DermaTend™ to your particular needs. Solace International Inc. is not liable for any reactions you might have to DermaTend™, including scarring. In buying DermaTend™ you are aware that you may experience scarring or adverse effects. Allergic reactions are rare, but if they occur discontinue using DermaTend™. DermaTend™ is clinically tested and is proven to be non-allergenic. Do not ingest DermaTend™ as it can be toxic to your system. Do not use near eyes or mucous membranes. If swallowed and unusual discomfort arises, consult a physician right away. If DermaTend™ gets into eyes, flush thoroughly with cool water.
